ARYAN GUPTA

Frontend Developer | React Specialist

aryan.gupta158935@gmail.com | +91 8178309134 | Gurgaon, Haryana, India

LinkedIn: https://www.linkedin.com/in/aryangupta81/ | GitHub: https://github.com/aryancodebase | Portfolio: https://portfolio-five-tan-lsz7ag73xh.vercel.app/

PROFESSIONAL SUMMARY

Frontend Developer, delivering user-facing features at software startups. Specialized in building fast, accessible, and mobile-first UIs using React, Redux, TypeScript, and Tailwind CSS. Proven expertise in API integration, component architecture, and end-to-end feature delivery. Seeking frontend-focused roles in product companies where UI excellence drives business impact.

PROFESSIONAL EXPERIENCE

Frontend Developer Intern | DevStreak | May 2025 - July 2025 | Noida, India

- Delivered 3 production UI modules including full user registration flow in 2-month sprint, reducing anticipated delivery time by 25% through reusable React component architecture
- Optimized page load performance by refactoring render-heavy components, eliminating unnecessary re-renders and achieving 40% faster interactions on low-bandwidth connections (measured via Lighthouse metrics)
- Collaborated in 4-person agile team using Git branching strategy and daily standups; merged 12+ pull requests with zero rollbacks across entire internship

PROJECTS

YouTube Clone | React, Redux, React Router, YouTube Data API v3, CSS Grid/Flexbox

***GitHub**: https://github.com/aryancodebase/Youtube-Clone | **Live Demo**: https://youtube-clone-virid-ten.vercel.app/*

- Integrated YouTube Data API v3 to display trending videos, live comment feeds, and timestamps - replicating core YouTube discovery UX with real-time API data
- Implemented Redux for global state management, eliminating prop-drilling across 10+ nested components and reducing component coupling
- Achieved full mobile responsiveness using CSS Flexbox and Grid with mobile-first approach; passed Google Lighthouse mobile usability audit (95+ score)

Weather Dashboard | React, React Router, Vite, TailwindCSS, TanStack Query

GitHub: https://github.com/aryancodebase/Weather-Dashboard | Live Demo: https://weather-dashboard-zeta-two.vercel.app/

- Developed a production-ready weather dashboard with GPS-based auto-location detection and dynamic date filtering (single-day + 2-year range), improving data accessibility and user interaction across devices.
- Boosted application performance by implementing parallel API requests and TanStack Query caching (5-min stale time), reducing redundant network calls and improving load speed by ~50%
- Built reusable, scalable UI components with Chart.js and zoom/pan functionality, enabling smooth visualization of high-volume datasets (hourly + historical) with responsive support across 5+ breakpoints
- Implemented robust state and data management with React hooks and custom geolocation logic, ensuring seamless error handling, fallback mechanisms, and consistent UX under varying network conditions

ScrollGram - Project Showcase App | React, React Query, React Context, Protected Routes

GitHub: https://github.com/aryancodebase/ScrollGram | Live Demo: https://scroll-gram-website-amcz.vercel.app/

- Shipped fully functional scroll-based showcase application with protected routing, frontend-only authentication, and persistent session state management - no backend required
- Implemented React Query (useQuery hook) for data fetching and caching, reducing redundant network calls by 60% compared to useEffect-based naive implementation

- Used React Context API for global auth state management, enabling role-based route protection across 6 views without third-party auth dependencies

TECHNICAL SKILLS

Frontend Technologies: React.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, Tailwind CSS, Material UI, Responsive Design

State Management & Data Fetching: React Query, Axios, Zod

Development Tools & Workflow: Vite, Git, GitHub, NPM, ESLint, Prettier

Backend (Familiar): Node.js

Programming Languages: JavaScript, TypeScript, Java

EDUCATION

BCA in Computer Science | IGNOU | 2021 - Current

CERTIFICATIONS & TRAINING

- Data Structures and Algorithms with Java - Apna College: Mastered core DSA concepts including arrays, linked lists, trees, graphs, and dynamic programming
- Full-Stack Web Development Training: Built production-grade projects including YouTube clone with live YouTube Data API v3 integration
